

7.1 Organization and Structure – Corporate Overview

CONTROL SYSTEMS SERVICES INC.

Commercial & Industrial Boiler Company

Re: Qualifications of Control Systems Services Inc.

Control Systems Services was established in 1985 and has been operating in the field of Boiler tube and refractory work, Installation of pipe and tanks, Burner Service, Combustion Controls, Gas Detection System Installation and Calibration, Tank Gage Monitor Installation and Repair, and various other control system installations, troubleshooting, and repairs. Our references speak for themselves.

We currently have 10 employees with expertise in the administration, gas controls and boiler fields. I have an extensive background in electrical and mechanical engineering as I spent 12 years in the Naval Nuclear Power Program. I have attended numerous schools in control programming, electronics, and related areas.

We have performed jobs such as installation of new burners on old boilers, refractory and retubing of boilers, installation of tanks, installation of pump systems, new boiler/burner installation startups, installation of gas detection systems, installation of tank gage monitors, installation and programming of VFD's, installation of DEP approved stack opacity monitoring systems, and complete upgrades of burner control schemes from wiring to programming.

I am confident based on experience alone that we can perform any job requested, from cleaning fire tube boilers to installation of a VFD. We also provide 24 hour emergency service with all of our service contracts.

At this time we are not affiliated via ownership or partnership with any other corporation.

No customer has ever been dissatisfied with the performance of my company or personnel.

Robert Smith, President & Owner
